GUIDED BY : Dr. P.VENKATESWARI, M.E., Ph.D.,
Lecturer / Computer Engineering

ABSTRACT

The Smart Unified Education Platform for Complete Academic Lifecycle is an integrated online learning system designed to provide seamless education services from kindergarten to post-graduation. The platform brings together multiple academic levels under a single digital ecosystem, allowing students, teachers, and parents to access educational content, assessments, progress tracking, and communication tools through one unified interface. It supports interactive learning materials such as videos, documents, quizzes, and recorded lectures, making the learning experience flexible, engaging, and accessible.

The system includes role-based access for students, teachers, and administrators, enabling efficient course creation, lesson management, content uploading, online quizzes, and real-time performance monitoring. By using modern web technologies, the platform ensures scalability, security, and ease of use across devices. The project aims to simplify the learning process, reduce dependency on multiple separate applications, and provide a centralized hub for lifelong education. This approach enhances digital learning efficiency and demonstrates how technology can support inclusive education across all age groups.

SYSTEM SPECIFICATION

Hardware Requirements

- **Processor:** Intel i3 / Dual Core
- **RAM:** 4 GB (8 GB recommended for AI-based features)
- **Storage:** Minimum 20 GB free space
- **Internet Connection:** Required for real-time content loading and AI suggestions

Software Requirements

Frontend

- HTML, CSS, JavaScript
- Bootstrap (for responsive and interactive UI)

Backend

- PHP
- Python
- REST API for communication between frontend and backend

Database

- MySQL

Signature of the Guide

Signature of the HOD
